Experience

Solutions Engineer / Software Engineer N-SIDE 2021 - 2026

SaaS platform optimizing complex clinical trials for pharmaceutical companies. Led a new API product branch from conception to production. Split 50/50 between solutions engineering (customer-facing product adoption) and development (building the API platform).

- **Customer Discovery:** Engaged directly with customers, technical users, and power users to understand their integration needs, workflows, and pain points, translating them into concrete product capabilities - designed and delivered ~20 API endpoints covering a wide range of use cases.
- **Data Extraction Product:** Extended API usage to internal teams for bulk data extraction (faster than manual UI workflows), then identified the same capability as a sellable product - customers could access their own historic supply chain data (shipments, CO2 emissions, trial duration, etc.) directly via the API. Launched a new profitable business line for the company.
- **PoC to Production:** Started from a Proof of Concept for a key client and iterated into a full working product now adopted by all existing accounts - integrated 5 new customers after initial launch.
- **Guided Adoption & Support:** Guided clients through integration with screencasts and hands-on support, answered technical emails covering problems, questions, and feature suggestions - significantly reducing integration friction and the volume of support requests.
- **Content creation:** Wrote all external documentation on how to use the API, produced video tutorials and demos, and presented new features to customers and the wider community - increasing API usage and cutting the number of technical support emails.
- **Developer Experience:** Started as a developer on the main web application, building features for clinical trial optimization. Pivoted to building the API infrastructure on the **TYK** gateway, designing internal documentation, and creating automation workflows.

Software Engineer Noesis Solutions 2017 - 2021

Cloud-native collaborative platform transforming legacy desktop simulation workflows into web-based engineering solutions.

- **Data Visualization:** Engineered complex data visualization dashboards almost from scratch using Java Web Toolkit (JwT), enabling engineers to interactively analyze and render large-scale engineering datasets with hundreds of thousands of data points.
- **Knowledge Sharing:** Created detailed internal documentation mapping out data sources, database extraction logic, and charting mechanics, successfully onboarding other developers and streamlining future dashboard iterations.

Freelance Software Developer Remote / Granada, Spain 2015 - 2017

- **Mobile Development:** Developed cross-platform mobile applications for iOS and Android from scratch using the Ionic framework.

Software Engineer (Research & Development) Universidad De Granada (DECSAI) 2015 - 2016

- Joined the Department of Computer Science and Artificial Intelligence to develop a fuzzy model to enhance user profiles in microblogging sites using deep relations.

Education

Universidad de Granada Granada, Spain
B.Eng. in Computer Engineering 2010 - 2015

- **Final Project:** Developed a complete real-time bus tracking system, including the Hybrid Android/iOS mobile applications and supporting backend infrastructure.

Personal Projects: pablodevrel.com

P1 **Your API needs a ❤️ Best Friend Forever ❤️** *Technical Content*

- Explained the difference between an API gateway and a BFF, and why product logic belongs behind the gateway, not in Tyk virtual endpoints.
- 🎥 YouTube video

P2 **So... Vercel doesn't have built-in email?** *Technical Content, Tutorial & Short*

- Wrote a step-by-step tutorial on setting up a professional email address for a Vercel-hosted domain using Amelu's free tier, with IMAP/SMTP support.
- DEV dev.to article | LinkedIn LinkedIn short

P3 **PearNote: Real-Time Sync Without a Backend** *Technical Content & Demo*

- Built a real-time collaborative sticky notes app with no server - two phones syncing peer-to-peer via the Holepunch stack.
- 🎥 YouTube video | Link to GitHub Repository

P4 **Pridianum: WWII Interactive Map** *Video Demo & Storytelling*

- Created a video demo telling a story through Pridianum, an interactive WWII map.
- 🌐 Website | Instagram reel

P5 **Beyond the Bytecode: Solving OWASP UnCrackable L1 with Guardsquare Tools** *Technical Video & Documentation*

- Created a step-by-step guide on bypassing root detection and decrypting AES-256 secrets in Android apps using `ProGuard Assembler`.
- 🎥 YouTube video | Link to GitHub Repository

P6 **Movie Kombat: React + TypeScript Tournament App** *Full-Stack Web Development & API Integration*

- Built an interactive movie bracket app using **React, TypeScript, and Tailwind CSS v4**.
- Integrated third-party API TMDB for movie search and platforms availability.
- Link to GitHub Repository | Live App | 🎥 Promo video | LinkedIn post

P7 **Fake Tinder: Progressive Web App (PWA) Experiment** *Mobile Web Development & Social Engineering Concept*

- Developed a prank-oriented PWA that mimics native app installation on iOS/Android via web manifests.
- Link to GitHub Repository

P8 **Technical Documentation & Learning Resources** *Educational Content Creation & Knowledge Sharing*

- Comprehensive documentation of technologies and frameworks I used in my work and projects.
- **React:** React documentation with Vite and Tailwind CSS integration guides (Vite + React + Tailwind | Learning React Guide)
- **Scala:** Documented advanced Scala concepts and Akka framework fundamentals for distributed systems (Rock the JVM - Scala | Akka Essentials)
- **Java & ORM:** Technical notes on Hibernate framework covering entity mapping, transactions, and best practices (Hibernate Course)

Skills

Technical Stack: Scala Akka Java JavaScript / TypeScript React AWS GitLab CI/CD
Content & Creative: CapCut OBS Studio Synfig Affinity Confluence
Languages: Spanish (Native) English (Full Professional) French (Professional) Dutch (Elementary)
