

Hi Sumsb team,

I'm a Software Engineer with 10+ years of experience building and integrating enterprise SaaS platforms, and I'm excited about the Solution Architect role to help customers seamlessly integrate Sumsb into their tech stacks.

At N-SIDE, I owned integrations end-to-end. I productized a REST API via TYK gateway, consolidating scattered middleware into a single endpoint and reducing client support tickets by 80% through proactive OpenAPI documentation. I designed custom Argo workflows that automated 50% of monthly client data extraction requests, eliminating manual operations entirely. I served as the technical bridge between end-users and engineering, troubleshooting complex issues and translating them into clear Confluence guides that became the primary resource for resolving 70% of user-reported tickets.

I'm hands-on with JavaScript, TypeScript, REST APIs, and databases (PostgreSQL, MySQL), and comfortable working directly with customer engineering teams to design scalable integration solutions and debug complex issues. I'm based in Belgium, available for remote EMEA, and ready to work under a B2B agreement.

I'd love to help Sumsb's customers navigate their integration journey smoothly.
