Solutions Engineer with 10+ years of software engineering and customer-facing experience, transitioning from building enterprise SaaS systems to helping customers adopt AI-powered solutions.

Summary

Hi Unframe team,

I'm a Software Engineer with over 10 years of experience building and productizing enterprise SaaS platforms, now actively transitioning into Solutions Engineering. I want to help Unframe's prospects connect the dots between their needs and what your platform makes possible.

At N-SIDE, I acted as the technical bridge between end-users and core algorithm experts. I productized a new REST API via a TYK gateway, consolidating middleware logic into a single backend endpoint - boosting performance by over 50% and reducing client support tickets by 80% through proactive OpenAPI documentation updates. I handled the 70% of user-reported tickets by translating complex simulation issues into clear troubleshooting guides and visual diagrams, accelerating bug resolution for finance and pharma customers.

I designed and delivered live training sessions for 50+ consultants to migrate users onto a seamless web workflow that improved data entry speed up to 100x. I built Argo workflows that automated over 50% of monthly client data extraction requests, eliminating manual operations entirely.

I'm a quick learner who thrives on new technology. When I wanted to learn Android reverse engineering, I created a full step-by-step guide solving OWASP UnCrackable L1 with GuardSquare's ProGuard Assembler - publishing it as both a YouTube video and GitHub repository. That's the kind of curiosity and hands-on depth I bring to understanding and demoing new platforms.

I'm AI-native in my workflow (Claude Code, Cursor), comfortable with Python, TypeScript, React, and REST APIs, and experienced working across distributed, cloud-native environments (AWS, GitLab CI, Postgres).

I'd love to help Unframe's enterprise customers understand and adopt AI in real, practical ways.
